VidyoGateway™ Version 3.5.1 (450) Resolved and Known Issues

The following table lists the resolved issues in VidyoGateway version 3.5.1 (450).

VidyoGateway Version 3.5.1 – Resolved Issues	
Key	**Summary**
VGW-2705	Some deadlock issues that occurred during very short duration H.323 calls have now been resolved.
VGW-2697	Some inconsistencies in configuring High Frame Rate sharing capabilities have been resolved.
VGW-2673	Content sharing failures that occurred on inbound SIP calls when latching was enabled have been resolved.
VGW-2662	For secure calls, H.224 is now correctly advertised as RTP/SAVP.
VGW-2632	GNU Gatekeeper gnu.gk log files now rotate weekly.

The following table lists the known issues in VidyoGateway version 3.5.1 (450).

VidyoGateway Version 3.5.1 – Known Issues	
Key	Summary
VGW-2706	SIP calls from some Avaya™ Scopia endpoints do not work; however, H.323 calls do.
VGW-2689	The hardware version of the product may sometimes display the incorrect processor type.
VGW-2663	In some cases, when a Vidyo endpoint has muted its audio, the VidyoGateway might still show its audio as enabled.
VGW-2566	Whitelisted and blacklisted IP addresses fail to download when using the Apple® Safari® browser.
VGW-2534	In some cases, H.323 participants joining Vidyo calls via audio-only service may hear announcements regarding DTMF tones for muting/unmuting their lines, but they will not be able to act upon them.
VGW-2277	The Admin UI does not prevent admins from downgrading a build.
VGW-2094	When hundreds of trusted certificate authority certificates are imported, the Security page Advanced tab takes a long time to load. In some cases, the browser may warn that the server is unresponsive.
VGW-1975	Enabling the IVR requires a default prefix; however, the Services page allows the default prefix to be deleted when the IVR is enabled.
VGW-1380	If a Polycom® HDX endpoint is receiving shared content from VidyoDesktop™ and then tries to send content, VidyoDesktop will not receive the content and, moreover, the HDX will stop showing the content being shared from VidyoDesktop.
VGW-843	DTMF tones are not detected on IVR calls using the Sony® PCS-XG80.
VGW-842	When VidyoGateway rejects calls on services that do not offer SRTP media encryption, the call is rejected with a "603 decline" message when a "488 not acceptable" message should appear instead.
VGW-585	LIFO content sharing does not work if shared content is already present in the conference. Workaround: If the queue is changed at all (the shared content is removed, added, or changed), LIFO works as expected.
